

YOUR GAME. YOUR STORY.

Brand Design System | v1.0 | March 2026

What Is TileSmith?

TileSmith creates custom 3D printed mahjong tile sets built around the themes, places, and stories that matter to you. Each set of 166 tiles is individually designed, 3D printed with precision, and finished by hand.

We offer curated themed collections — like our Minnesota set — alongside fully bespoke commissions where customers tell us their story and we translate it into a one-of-a-kind game.

Brand Positioning

Competitors like That's Mahj focus on portability and coastal lifestyle. The Mahjong Line leads with luxury aesthetics. TileSmith differentiates through meaningful personalization — every set tells a specific story through bold, high-contrast graphic art inspired by woodcut and linocut printmaking traditions.

Brand Pillars

Craftsmanship

Every tile is 3D printed at high resolution and hand-finished. We name our materials and processes because precision builds trust.

Personalization

Your Game. Your Story. Each set is themed around what matters to the owner — a place, a passion, a heritage.

Bold Artistry

Our tile designs use high-contrast black silhouettes — a distinctive graphic language that stands apart in a market of pastels.

02 Color Palette

A restrained palette that lets the bold tile artwork command attention.

Color Usage Rules

- Obsidian + Ivory is the default pairing for all text and backgrounds.
- Forge Gold is used sparingly — CTAs, the 'Smith' in the wordmark, accents.
- Never use Forge Gold for large background areas or body text.
- Deep Teal is reserved for interactive elements (links, hover states).
- Maintain a minimum contrast ratio of 4.5:1 for all text pairings.
- When placing the logo on photography, use a solid backing shape.

DISPLAY

Playfair Display

Used for headings, the wordmark, and editorial moments.

Weights: Bold (700), Black (900). High-contrast serifs echo the boldness of our tile art.

Custom Mahjong, Crafted With Purpose

Your Game. Your Story.

BODY

Inter

Used for body copy, UI elements, and navigation.

Weights: Regular (400), Medium (500), Semibold (600), Bold (700).

Every TileSmith set begins as a conversation about what matters to you — the places, phrases, symbols, and stories that define your world. We translate that into 166 individually designed tiles.

TECHNICAL

JetBrains Mono

Used for product specs, SKUs, catalog numbers, and technical details.

SKU: TS-MN-2026-001

Set: Minnesota Collection

Tiles: 166 pcs / PLA+ / 600 micron

Dimensions: 30mm x 23mm x 16mm

Type Scale

32pt **H1 — Display**

22pt **H2 — Section Title**

16pt **H3 — Subsection**

11pt **Body**

9pt **Caption**

8pt **Overline**

04 Logo System

The TileSmith mark uses the silhouette of a mahjong tile — a tall, slightly beveled rectangle — containing the "T" initial. The subtle drop shadow gives the icon the dimensional quality of a real tile. "Smith" is always in Forge Gold to emphasize craftsmanship.

PRIMARY — DARK BACKGROUND

PRIMARY — LIGHT BACKGROUND

Logo Rules

- The icon is a mahjong tile shape (approx. 3:4 width-to-height ratio).
- Minimum clear space: equal to the icon height on all sides.
- Minimum logo width: 120px on screen, 1 inch in print.
- "Smith" is always in Forge Gold on dark/light backgrounds.
- On the gold background variant, the full wordmark is Obsidian.
- Never separate the icon from the wordmark.
- Never rotate, distort, or add effects to the logo.
- Never place on busy/cluttered backgrounds without a solid backing.
- The drop shadow is part of the mark — do not remove it.

TileSmith speaks with quiet confidence. We're artisans, not salespeople — knowledgeable, warm, and precise. We let the craft do the talking.

Confident, Not Boastful

We know our craft is exceptional. We state it plainly without superlatives.

DO: "Each tile is 3D printed at 600-micron resolution and finished by hand."

DON'T: "Our AMAZING tiles are the BEST mahjong tiles ever created!!!"

Personal, Not Casual

We connect with customers as individuals. Warm but never sloppy.

DO: "Tell us about the place that matters most to you."

DON'T: "Hey guys! Hit us up with your fave spots lol"

Specific, Not Vague

Precision builds trust. We name materials, processes, and details.

DO: "PLA+ filament, layer by layer. 166 tiles, each one unique."

DON'T: "High-quality materials and premium craftsmanship."

Storyed, Not Decorative

Every design choice has meaning. We explain the why.

DO: "The 1-Crack features You Betcha — words every Minnesotan knows."

DON'T: "Fun and quirky designs to make your game pop!"

Photography Direction

- Product shots on neutral surfaces: wood, linen, matte paper.
- Show tiles in context — hands holding them, mid-game arrangements.
- Group tiles by suit to showcase the thematic artwork.
- Natural lighting preferred; clean, well-lit compositions.
- Shallow depth of field to draw focus to tile detail.

What to Avoid

- Cluttered compositions or busy backgrounds.
- Heavy filters, saturated colors, or neon backdrops.
- Stock photography of generic game nights.
- Showing tiles too small to read the artwork.
- Mixing brand photography styles within a single campaign.

Social Media Guidelines

- Instagram: Hero shots of individual tiles with detail. Use Obsidian backgrounds.
- Stories/Reels: Behind-the-scenes of printing and finishing process.
- Captions: Voice should be Personal, Not Casual. Share the story behind each tile.
- Hashtags: #TileSmith #YourGameYourStory #CustomMahjong #3DPrintedMahjong
- Never use the logo as a profile photo — use the T icon mark alone.

Packaging

- Matte black exterior with Forge Gold foil logo.
- Interior lined in Ivory with tile slots visible on open.
- Include a card telling the story of the set's theme.
- Print specs (SKU, material, dimensions) in JetBrains Mono.

Your Game. Your Story.
